

ZENON

THE NETWORK OF MOMENTUM

Only a moron would spend BTC for a good with non-deflationary value.
But that doesn't mean that transaction shouldn't occur.

x x x x

The Foundation For A Trustless Economy

Zenon is a novel dual-ledger that progressively decentralizes through a dual-coin architecture. By using Bitcoin's PoW as root consensus, it can make any application, organization, or asset transfer

- **as trustless as Bitcoin**
- **feeless**
- **mass-scalable**

Smart contract L1s failed

- x Founder cults
- x Scalability issues
- x Progressive centralization
- x Consensus validator oligarchy
- x Unfair insider advantages from day 1

Bitcoin scaling is not solved

- PoW security not reusable beyond native BTC
- LN is capital inefficient & not trustless
- BTC is not suited for non-deflationary goods
- No feeless smart contracts & oracles
- Bitcoin is not supposed to scale on mainchain

>bitcoin

zenon

quasar

BTC

ZNN

QSR

Digital Gold

- Tokenizes energy
- Energy constrained value
- Proof of Work Layer 1
- Deflationary
- Mining capacity is based on energy technology & physics
- Right to mint is limited by mining hardware
- Tender for deflationary goods

Digital Gold Notes

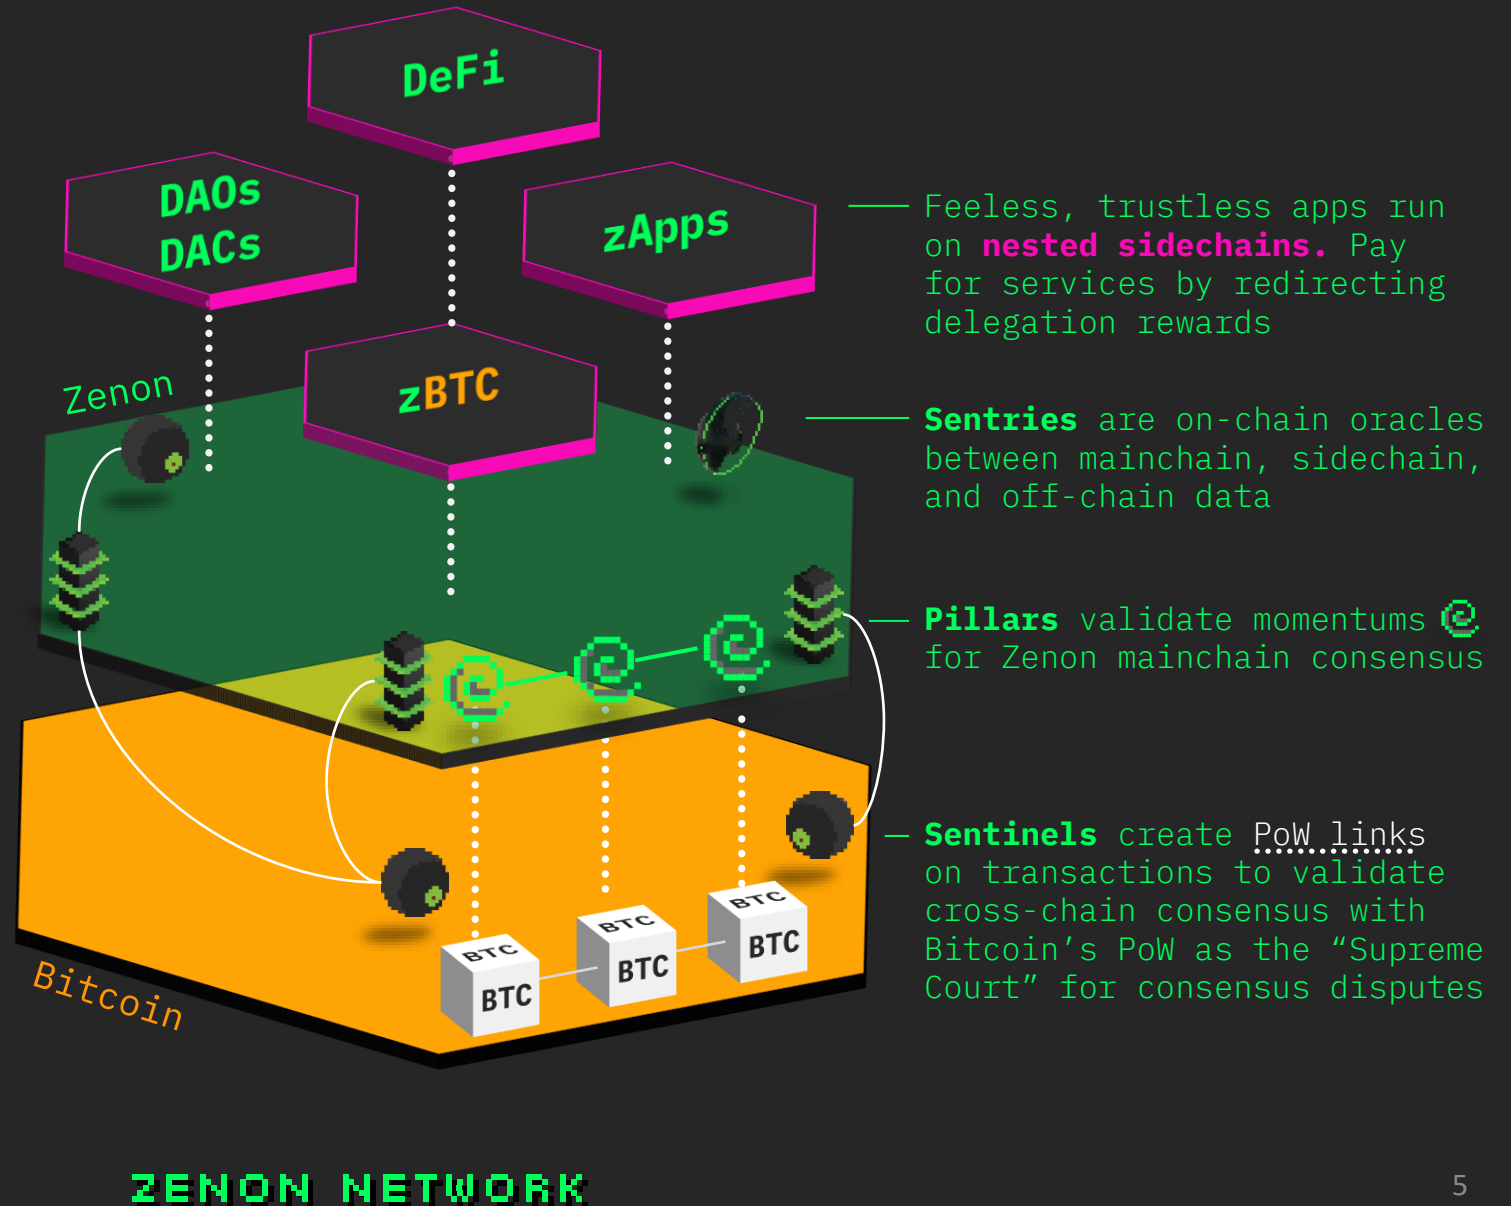

- Tokenizes right to mint
- Socially assigned value
- Smart Contract Layer 1 + 2
- Disinflationary
- Minting capacity is based on good governance
- Right to mint is limited by cyclical delegator assignment
- Tender for inflationary goods

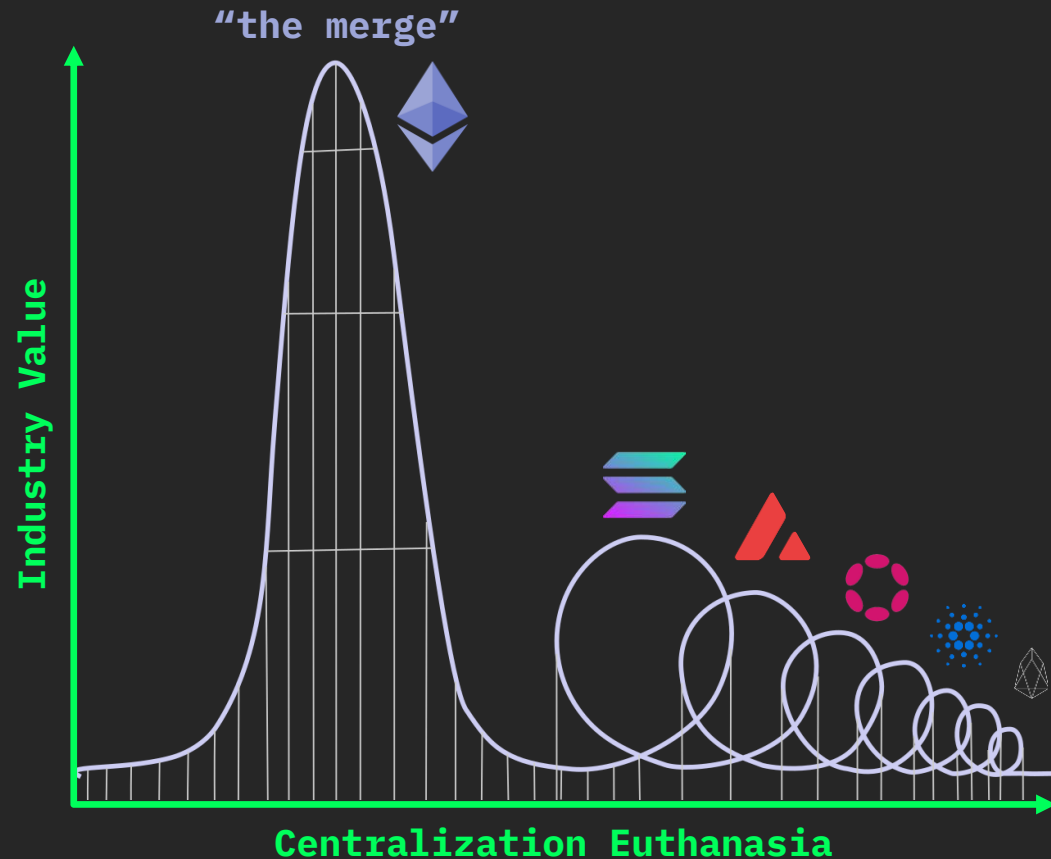

Feeless Digital Transactions

- Tokenizes TX throughput
- Network usage derived value
- "Free gas"
- Disinflationary
- Minting capacity is based on opportunity costs
- Right to mint is limited by network security contributions
- Tender for network usage

Layered scaling with Taproot

- **Zenon Network of Momentum**
Feeless Smart Contract L1
Feeless Bitcoin L2
- **Dual Ledger**
Block-Lattice + Meta DAG
- **Dual Token Economy**
ZNN = Payment + infra collateral
QSR = Tokenized tx throughput
- **On-Chain Smart Contracts**
+ Oracles & Unikernels
+ Zenon Token Standard
- **Progressive Decentralization**
Egalitarian validator set creation
Strong decentralization incentives

Real progress means tapping into the roots of Bitcoin.

- Corporate Web3 milked the market dry with failing copycat networks.
- PoS validators sacrificed censorship resistance to regulators.
- CBDCs and the current central bank circus drives smart money to Bitcoin.
- Builders want skin in the game and a level playing field - not enriching insiders.

BTC & ETH On-Chain Fees

>\$14b

on-chain fees would
have been saved by
Zenon over the last
6 years

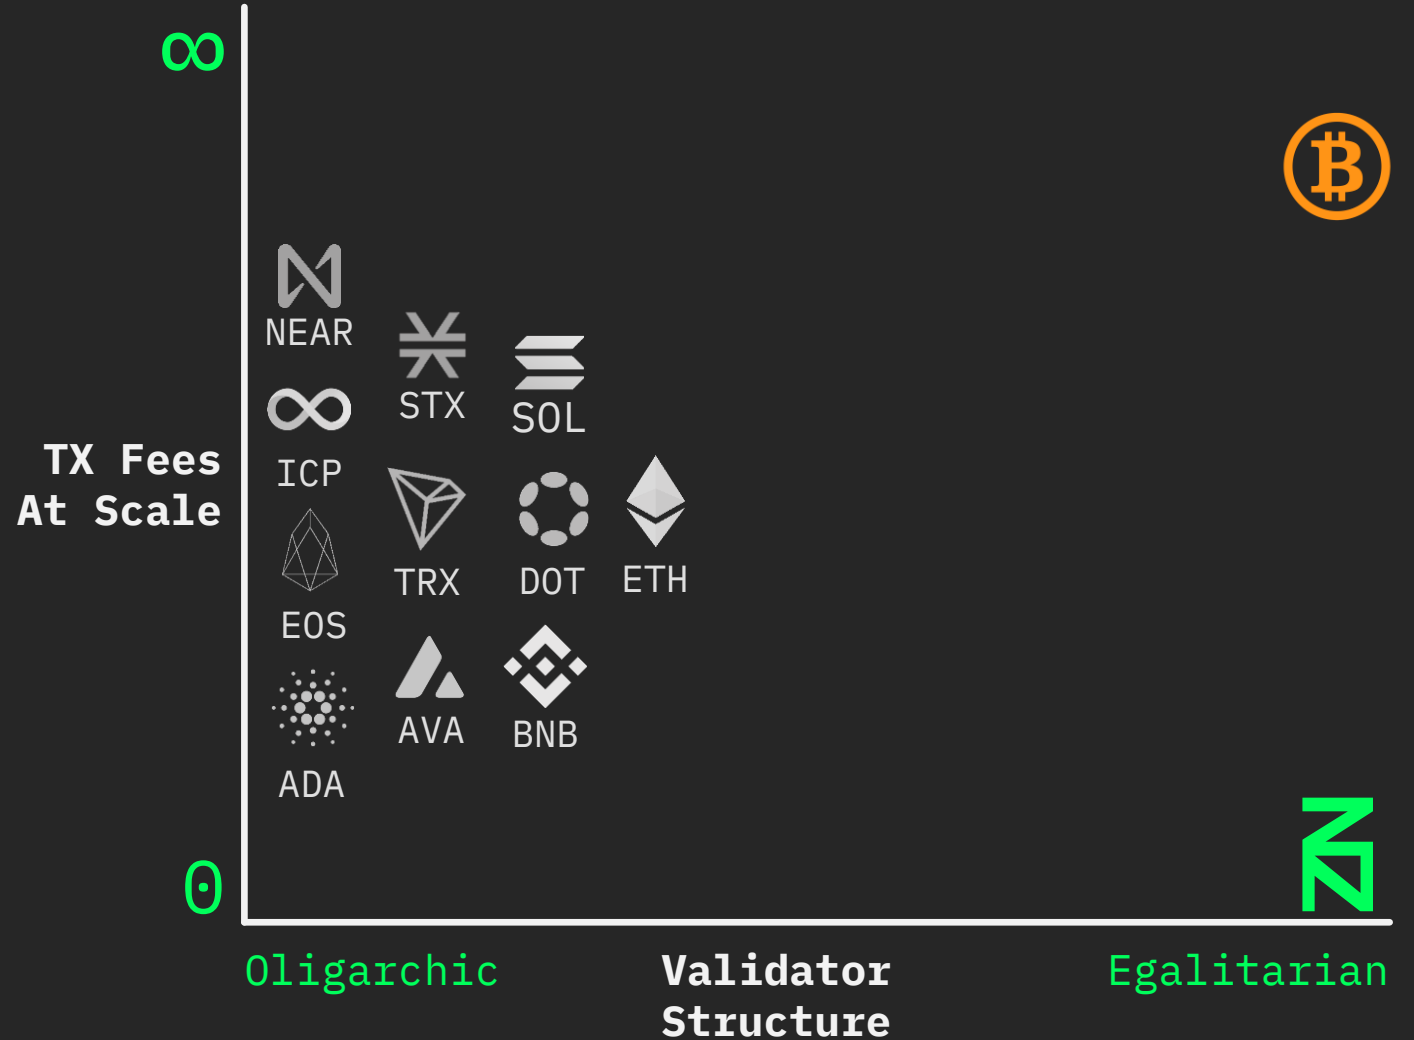

assuming

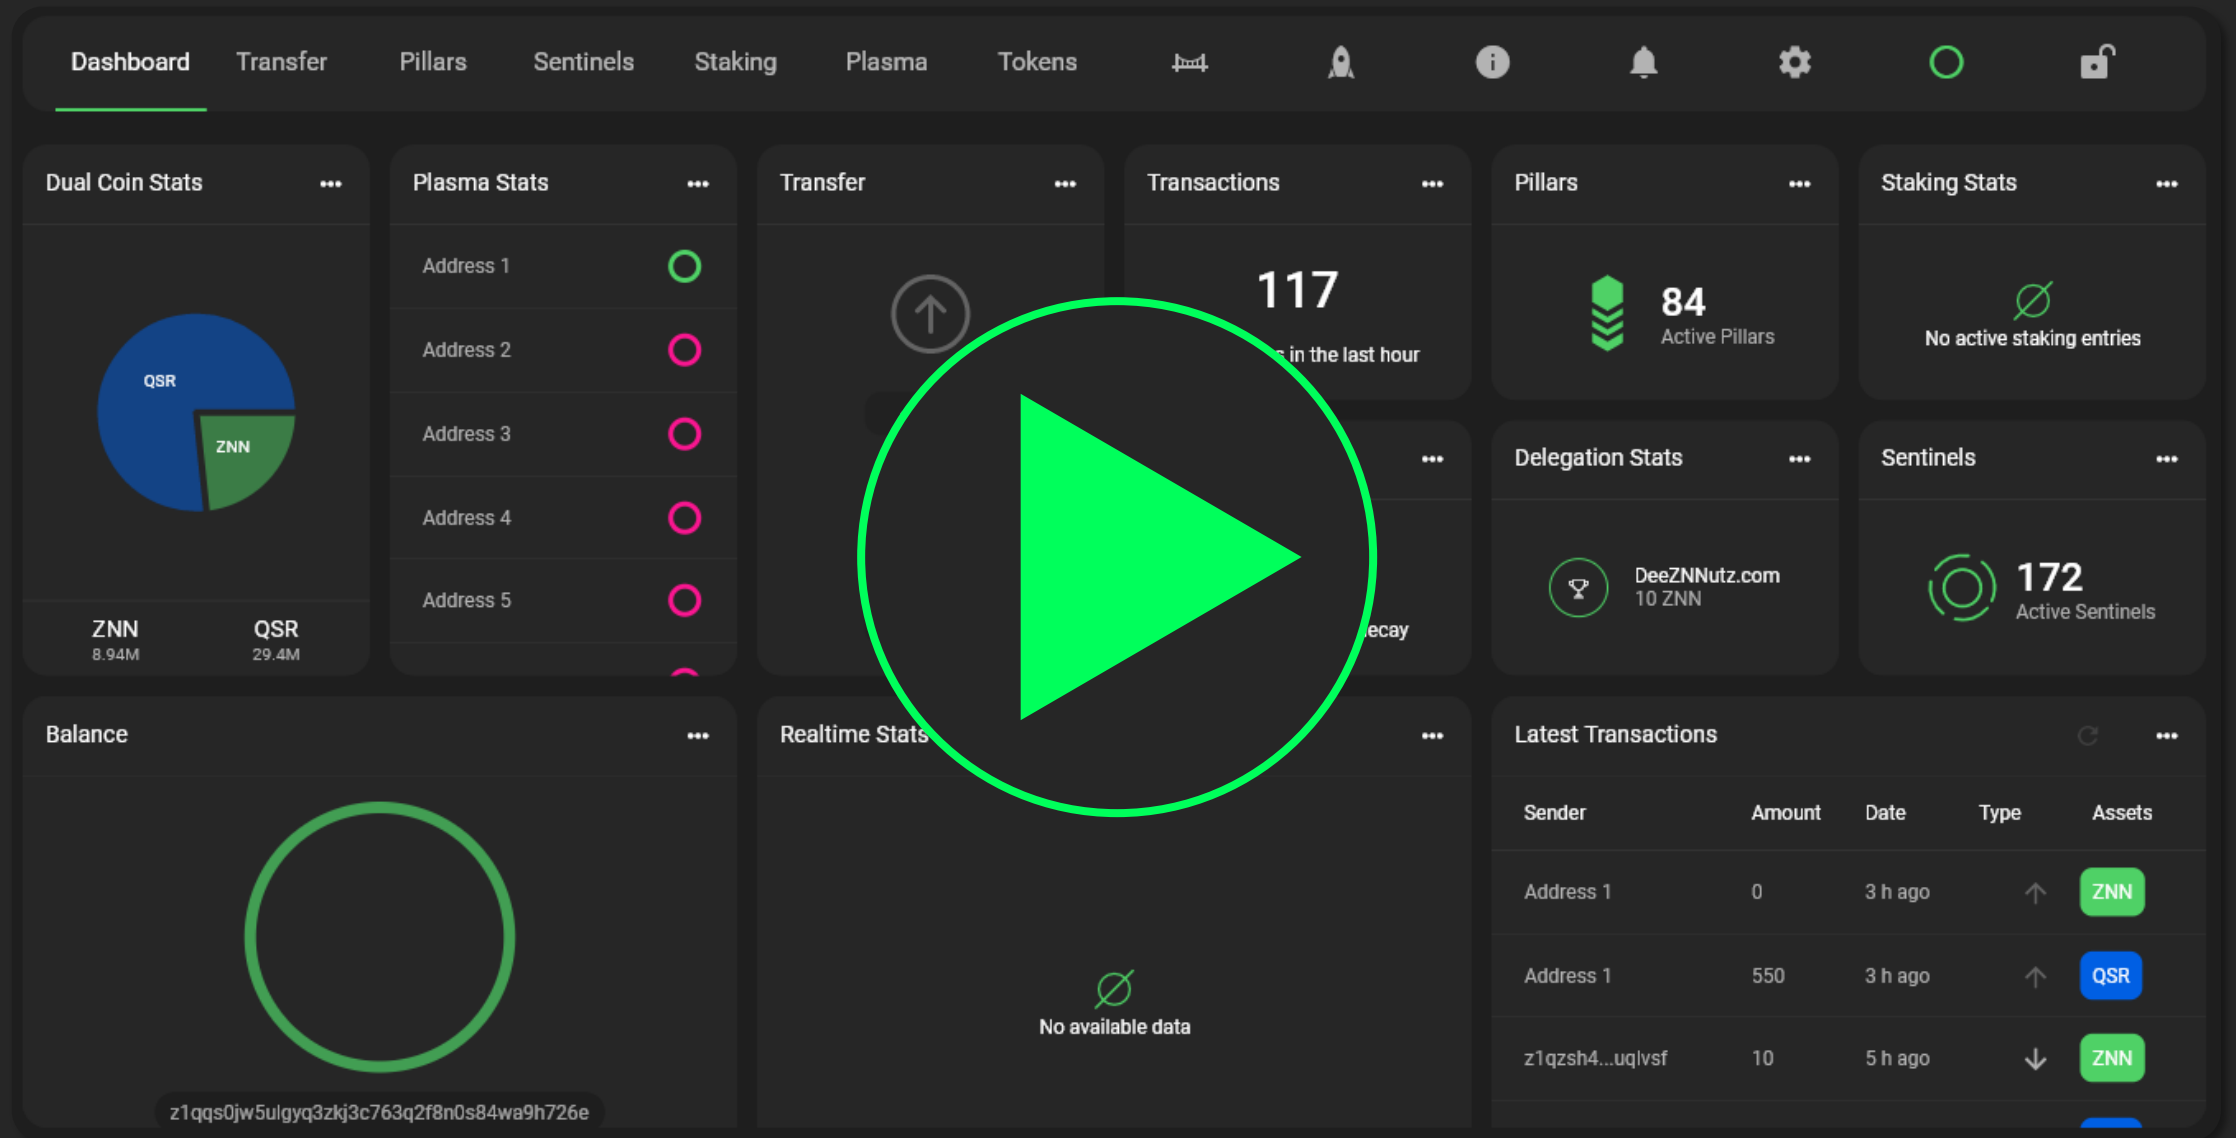

>90% of ETH fees
eliminated

>30% of BTC fees
eliminated with zBTC

Zenon's USPs

- Feeless txs
- Embedded smart contracts & oracles
- Decentralization incentives
- MEV resistant
- Pure, libertarian genesis w/ BTC refund "xStakes"
- Leaderless community
- Dogmatic to Bitcoin ethos

100% Egalitarian. Like Bitcoin.

Almost all ZNN was initially “given away” via a BTC<>ZNN bonding & refund algorithm called “xStakes”.

- 5k ZNN per 1 BTC
- **Full BTC refund** for committed validators
- **Network Stability Fund** to bootstrap the legacy network was fully distributed to validators
- **Zenon Fabric Fund** consisted of locked ZNN that did not generate any rewards. They are now used to fund Accelerator Z, the Orbital Program and Vested Pillars.

	ZNN	QSA
Pillar nodes <i>7-day revoke window every 83 days</i>	 Lock 15'000  Earn 50% of emissions	 Burn >270'000 <i>started at 150k & increases by 10k per Pillar slot</i>
Sentinel nodes <i>3-day revoke window every 27 days</i>	 Lock 5'000  Earn 13% of emissions	 Lock 50'000  Earn 25% of emissions
Stakers <i>1-12 month lockup periods</i>	 Lock any	 Earn 50% of emissions
Delegators <i>no lockup period</i>	 Earn 24% of emissions	
Liquidity Provisioning <i>no lockup period</i>	 Earn 13% of emissions	 Earn 25% of emissions

ZNN / QSR Alphanet Circulating Supply

Alphanet 30 Day Epochs; 0 = Genesis (Nov 2021)

- Our developers are anonymous
- Our funding source is the community
- Our leadership is leaderless
- Our credo is "Acta, non verba"
- Our devotion is to the cypherpunk ethos
- Our culture is the early Bitcoin community's
- Our vision is Network States on Bitcoin

Join the trustless revolution.

"Never doubt you can make history. You already have."

@zenon_network

Zenon.Network is a community driven project, initiated by anonymous founding developers who are building and delivering the Network of Momentum core protocol quietly behind the scenes.

As such, some of the concepts presented in this deck constitute interpretations and ambitions by the community that are not yet conclusively defined or implemented, and are therefore subject to change pending design and development progress.
