Zenon Network: How to apply for a funding grant

Zyler9985 · [Follow](#)

...

To apply for a funding grant from Zenon Network, there are two steps:

- (1) Informally post your proposal on the **Zenon Community Forum** in the “Accelerator Z” section to allow for a discussion regarding your idea, funding requested etc. Try to follow the available template for your submission. This step of engaging with the community is highly recommended, as ultimately the community votes to approve or deny your application.

(2) Formally submit your proposal via the **SYRIUS wallet**. The links for the forum and the official website to download the wallet are immediately below, but see the very end of this article for a tutorial with screenshots.

Zenon Network Forum

Zenon - Network of Momentum

The self-evolving network empowering anyone through true decentralization Zenon is a cryptocurrency based on a...

zenon.network

What kind of projects can be submitted?

- (1) Broadly, anything that adds value to the ecosystem.
- (2) More specifically, there are goals the community has stated that they need and/or would like to see which are a priority. These typically fall under tech, sales or marketing — more in-depth examples can be found in the

official medium article on Accelerator Z, which also discusses many other important things. See the link below for the **official article**:

Hyperspace x Accelerator-Z: towards a DAO of DAOs

1. Definitions
2. Team structure & target projects
3. Application, onboarding, and funding processes
4. Final notes

[medium.com](https://medium.com/@Zyler9985/hyperspace-x-accelerator-z-towards-a-dao-of-daos-e977b7efce0d)

Step-by-step tutorial for actually applying

1. Visit the official twitter page for Zenon Network and download the SYRIUS wallet.

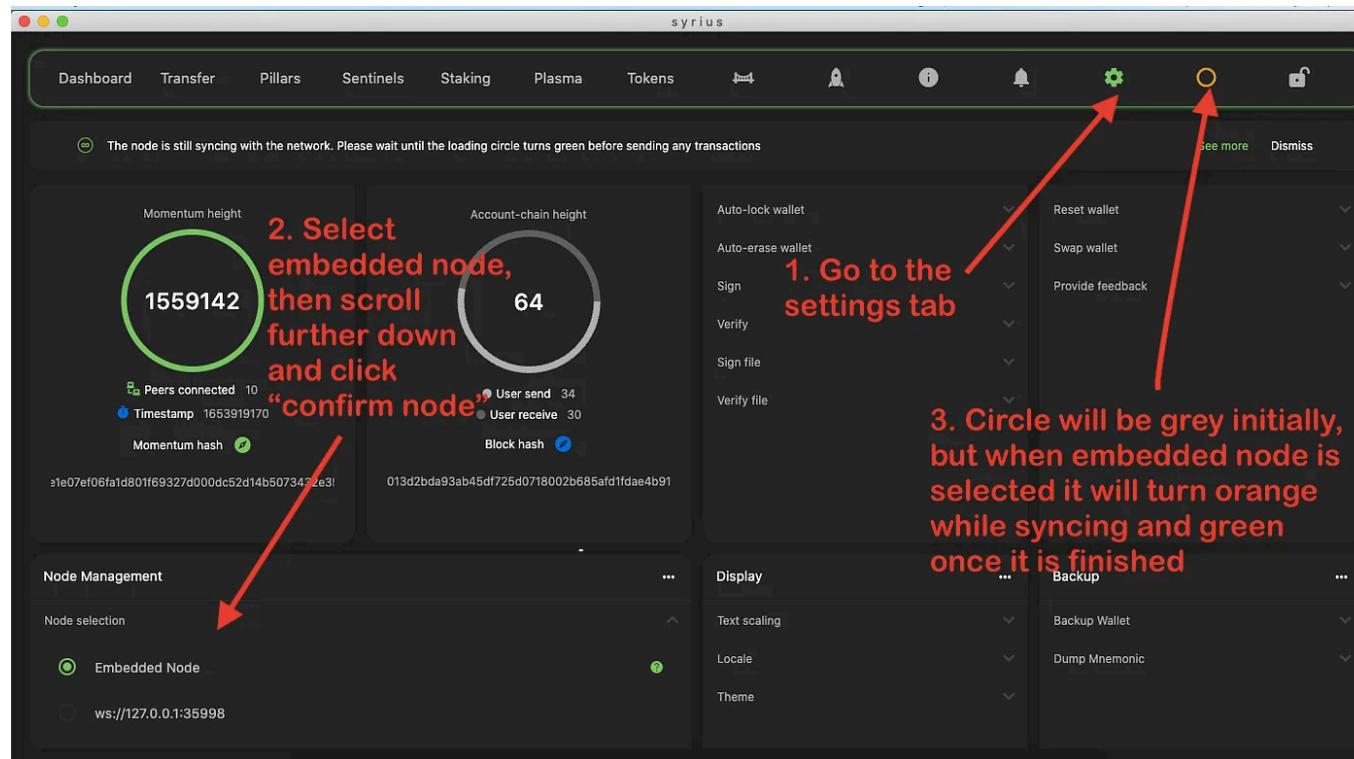

The screenshot shows the Twitter profile of the official Zenon Network account. The profile picture is a green 3D geometric logo. The username is "Zenon" and the handle is "@Zenon_Network". A red circle highlights the handle. The bio reads: "A fast, secure, scalable & feeless layer-1 network with a progressive decentralization path modeled by the values and ethos of Bitcoin." Below the bio, it says "\$ZNN \$QSR dual-economy". The categories listed are "Science & Technology" and "Space". The website link "zenon.network" is highlighted with a red circle. The account was joined in May 2018. At the top of the profile, there is a banner with the text "The self-evolving network empowering everyone through true decentralization" and "ALPHANET". The banner also features the letters Z, E, N, and O in green, with the text "ATOMIC ERA", "MISSION 2022", and "NETWORK OF MOMENTUM".

1. Make sure it is the correct twitter page

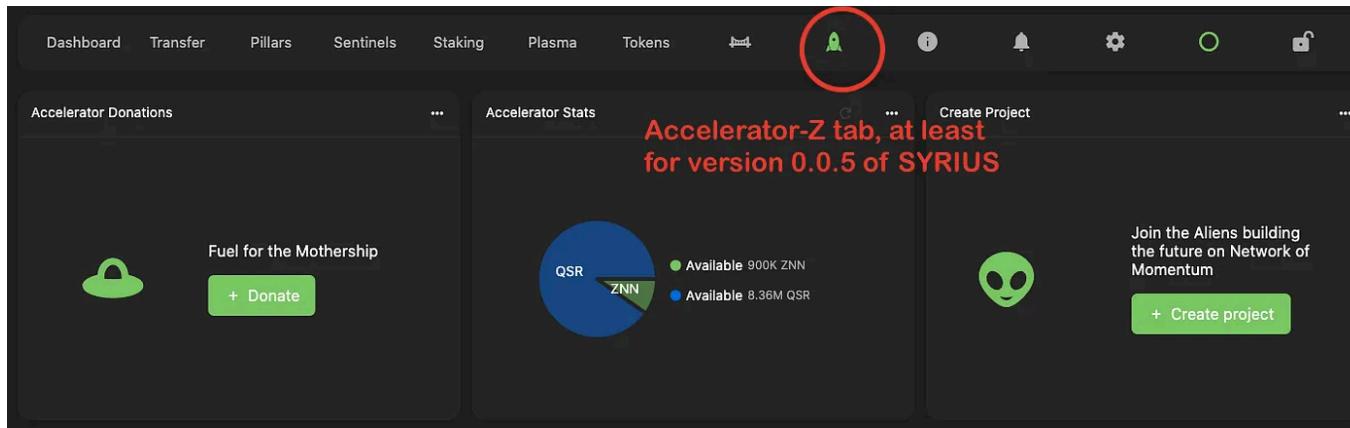

2. Go to their website

2. Let the SYRIUS wallet update itself. Go to settings gear icon, scroll down, select node, click embedded node, scroll further down click confirm node.

May take a few hours for the embedded node to sync.

3. Go to the “Accelerator Z” tab, it’s the rocket ship icon. Click create project. You will need to spend 1 ZNN on its creation. Include the name, a brief description 1-2 sentences is all that’s needed, and most importantly a link to where your proposal is. Ideally it should be a URL to the post you made on the community forum for your informal submission which follows the template available as a pinned post on the forum in the “Accelerator Z” section.

This screenshot shows the first step of the project creation process. The title is '1 Project creation'. It asks for the 'Address 3' where the project owner will be registered. It notes that '101 ZNN available'. A warning message in a dashed box states: 'Creating a project consumes 1 ZNN that goes to the Accelerator'. Below the input field are 'Cancel' and 'Continue' buttons. To the right, there is a vertical navigation bar with steps 2 ('Project details') and 3 ('Submit project'). On the far right, there is a note: '- Your address must have at least 1 ZNN available. - When you click submit, 14-day timer commences.'

1 Project creation

This will be your project owner address

Address 3

101 ZNN available

! Creating a project consumes 1 ZNN that goes to the Accelerator

Cancel Continue

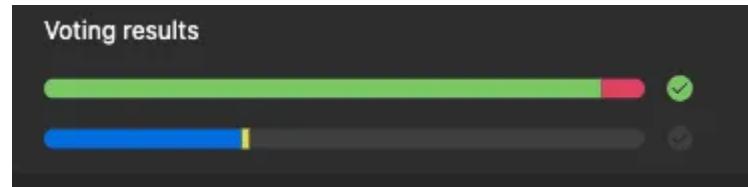

2 Project details

3 Submit project

- Your address must have at least 1 ZNN available.
- When you click submit, 14-day timer commences.

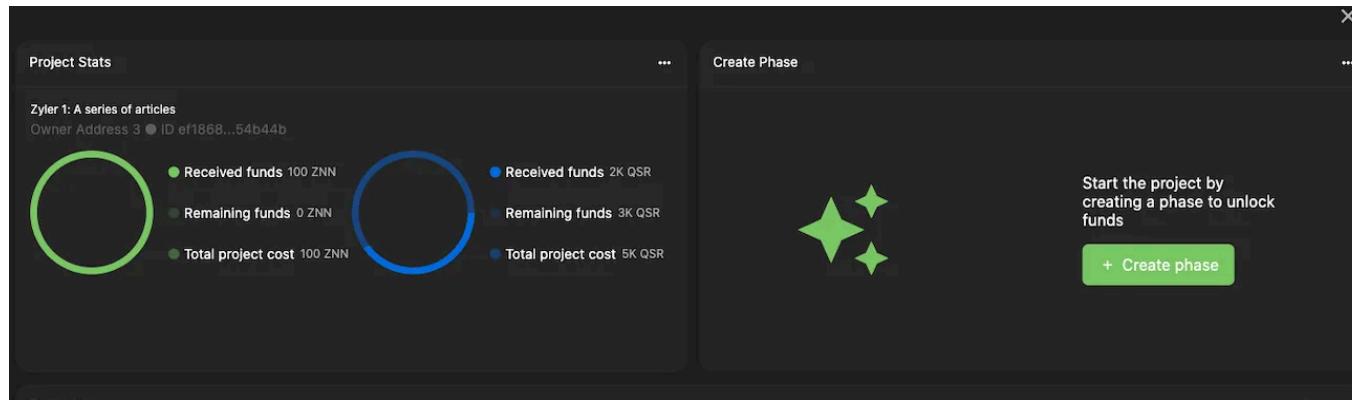

4. Now you have a 14-day window where the community will vote on your proposal. The pillars vote and delegators influence their vote — so try to appeal to everybody. Ideally the lobbying is done before you formally submit, but you do have this 14 day window as well once you submit in the wallet.

- green bar is yes votes, red bar is no votes (pillars that voted the “abstain” option is not shown here)
- blue is total number of votes (including yes, no and abstain) while the yellow bar is how many votes needed to reach the quorum (1/3 of pillars)

5. If the project is accepted, congratulations — this is a show of good faith by the community that if you can do a good job on delivering, these funds will be released to you. Next you need to create the phases for your project; only by successfully completing each phase can a portion of the funds get released. Note that there is no time limit on phase voting — but you can still be denied if you fail to reach the majority of yes votes.

- Click on your approved project, which brings you to a new page where you can click create phase. (You can't create all of the phases at once because this will constitute spam, **can only create one phase at a time** and offer it for review — unless it is a single phase project).
- In your proposal, you can say you will do 3 phases, but there is no way to say this inside the actual SYRIUS wallet. It is only understood by **how you break up the funds**. So if you split your funds 3 ways, that's 3 phases. Doesn't have to be three equal portions either. Ideally, the exact breakdown of the total funds for each phase should already be stated and agreed upon in your proposal to the forum.

The screenshot shows a dark-themed web application for managing project phases. At the top left, a green circular icon contains the number '1' next to the text 'Phase details'. Below this, a message states 'This phase belongs to Project ID ef1868...54b44b'. The main area contains several input fields:

- 'Phase name' field.
- 'Phase description' field.
- 'Phase URL' field with a question mark icon.
- 'Total phase budget' field showing '0' with buttons for 'ZNN' and 'MAX'.
- 'QSR Amount' field with a red border, showing 'Enter a valid amount' and buttons for 'QSR' and 'MAX'.

At the bottom, there are 'Cancel' and 'Continue' buttons. A second section, '2 Submit phase', is partially visible below the first.

Community-made articles on Accelerator Z

For further reading on Accelerator Z check out the articles below!

- **Web3 is dead. Long-live Accelerator Z.** A big-brained community member's thoughts on Accelerator Z; worth a read by anyone. Also gives

insight which is very valuable for a non-technical person, for example when he is discussing SDKs (amongst other things), done by George.

- **Simple Guideline for AZ Proposals.** Mainly covers how to trust who is submitting and are they asking for too much?
- **Budgeting in 5d Hyperspace.** Some nice infographics and thoughts about price volatility and strategy for budgeting our AZ fund over time, done by Ztark.

Web3 is dead. Long live Accelerator-Z.

Congratulations to the Zenon devs and the community for the successful launch of Accelerator-Z!

Software Development Engineer Mar. 2020 – May 2021

- Developed Amazon checkout and payment services to handle traffic of 10 Million daily global transactions
- Integrated Iframes for credit cards and bank accounts to secure 80% of all consumer traffic and prevent CSRF, cross-site scripting, and cookie-jacking
- Led Your Transactions implementation for JavaScript front-end framework to showcase consumer transactions and reduce call center costs by \$25 Million
- Recovered Saudi Arabia checkout failure impacting 4000+ customers due to incorrect GET form redirection

Projects

NinjaPrep.io (React)

- Platform to offer coding problem practice with built in code editor and written + video solutions in React
- Utilized Nginx to reverse proxy IP address on Digital Ocean hosts
- Developed using Styled-Components for 95% CSS styling to ensure proper CSS scoping
- Implemented Docker with Seccomp to safely run user submitted code with < 2.2s runtime

HeatMap (JavaScript)

- Visualized Google Takeout location data of location history using Google Maps API and Google Maps heatmap code with React
- Included local file system storage to reliably handle 5mb of location history data
- Implemented Express to include routing between pages and jQuery to parse Google Map and implement heatmap overlay
